

PROJECT TITLE	Karaman Province within National Improvement Project for Small Ruminants at Breeders Conditions
PROJECT NUMBER	70 KIL 2013-2
PROJECT LEADER	YAVUZ KAL
RESEARCHERS	HARUN GÜLCAN
INSTITUTE	Bahri Dağdaş International Agricultural Institute
START AND END DATE	2018-2023
PROJECT RESOURCE AND BUDGET	TAGEM
PROJECT DEPARTMENT	HAYSUD
SUMMARY: With this project, it is aimed to improve Hair Goats, which is breeding at breeders' conditions, in terms of growth performance. For this purpose, the live weight of the kids at the age of birth and the 90th day will be determined. On the 90th day, based on live weight, the best performing kids with appropriate breed-specific morphological characteristics will be determined as breeding goats and bucks. In the study, 6000 head of goats and 300 head of bucks will be used. As far as possible, all the animals of an enterprise will be included in the project. With this project, it is aimed to produce at least 300 heads of superior skilled breeding bucks per year. The aim of the project to obtain highly qualified male and female breeders. In addition to these, it is also among our goals to protect the Hair Goat breed, to increase the early development characteristics of its goats, to create herds of Hair Goats registered in the breeders' conditions, to encourage the establishment of breeding associations or cooperatives specific to this breed, and to increase the income of breeders from each head of goat.	
KEY WORDS: Goat, Breeding, Breeding at breeders' conditions
